

PharmaCare — Visual Guide

Pictures and simple steps. Written for the people at the counter, not for developers.

What's inside

1. [Getting to know your screen](#)
2. [Signing in](#)
3. [Selling something \(the till\)](#)
4. [What you can sell — not just medicines](#)
5. [Receiving a delivery](#)
6. [How profit is worked out](#)
7. [Checking stock and expiry](#)
8. [Who can do what](#)
9. [When something goes wrong](#)

1. Getting to know your screen

Every page has the same three parts. Once you know these, you can find anything.

The three parts of every screen

1 The menu (left, black)

Your list of pages. You only see pages your job needs. The yellow bar shows where you are now. On a phone, tap the ☰ button to open it.

2 The top bar

🌐 changes the language (English / ལྷག་པོ་). 🔔 shows your alerts — a red number means unread. Your name on the right is where you sign out.

3 The main area

Whatever you are working on right now.

2. Signing in

PC

Username

cashier1

Password

.....

Sign In

First time signing in? You will be asked to create your own password straight away. This is normal — it means nobody else knows it, not even your manager. Use at least 10 characters with a capital letter, a small letter, a number and a symbol.

Wrong password 5 times? The system locks for 30 minutes to keep your account safe. Wait, or ask your Administrator.

After signing in you land on the page you use most: **Cashiers and Pharmacists** → the till. **Store Managers** → Inventory. **Administrators** → Dashboard.

3. Selling something (the till)

This is the **Point of Sale** page. Left side: find the item. Right side: the basket and payment.

Scan barcode or type a name

The till, with the four things you touch

1 Scan or type

Point the scanner at the barcode — the item drops into the basket by itself. Or type part of the name and pick from the list.

2 Check the item

Under each name you see what it is (Medicine, Medical Device, Cosmetic...) and how many are left. A red

Rx

tag means a prescription is needed.

3 Adjust the basket

Change *qty* for more than one. Add a *disc %* for a discount. The ✕ removes a line. Totals update by themselves.

4 Take payment

Pick the customer (or leave Walk-in), choose Cash / Card / Mobile Money, type what they handed you — the change appears. Then press

Complete Sale

You cannot oversell. If you try to sell more than you have, the system stops you and tells you exactly how many are left. Stock drops the moment the sale finishes.

Need the receipt again? Menu → **Sales** → find the invoice → press the receipt icon → Print.

4. What you can sell — not just medicines

The counter sells more than tablets, so everything lives in one catalogue. Each item has a **type**.

**Medicines**
tablets, syrups

**Cosmetics**
creams, lotions

**Medical Supplies**
bandages, gauze

**Devices & Supports**
knee braces, BP monitors

**Supplements**
vitamins

**Baby & Mother**
nappies, formula

All types work the same way
Same till · same stock counts · same reports · same profit maths
Nothing extra to learn

Things that never expire — a knee brace or a BP monitor — simply have no expiry date, and they are never included in expiry warnings. Anything you swallow or put on skin *must* have an expiry date; the system will insist on one.

5. Receiving a delivery Store Manager

Menu → **Purchases** → **Record Purchase**.

Supplier: Addis Pharma Distribution ▼ Purchase date: 2026-08-13

Line items

Product	Qty	Cost each	New selling price	Disc %	VAT %
Paracetamol 500mg ▼	100	30.00	60.00	0	15

Invoice total: 3,450.00

+ Add Item

One row to start — press + **Add Item** for each extra product

1 Pick the supplier and date

From the delivery note.

2 Fill the first row

Product, how many arrived, and **cost each** for this delivery.

3 Only if the price to customers is changing

Type the new figure in **New selling price** (the yellow box). Leave it empty to keep the current price.

4 Press + Add Item for each extra product

Add as many rows as the delivery note has. The invoice total adds up as you type.

5 Save Purchase & Update Stock

Stock goes up straight away.

Check before you save. A purchase cannot be edited afterwards, because it is a money record. If you get it wrong, an Administrator must delete it (which also puts the stock back) and you record it again.

6. How profit is worked out

This is the part people ask about most, so here it is in pictures.

You bought the same product twice, at different prices

Older stock
40 pieces
cost 20 ETB each
sold at 50 ETB

Newer stock
100 pieces
cost 30 ETB each
sold at 60 ETB

The system keeps them apart
Each delivery is its own “batch”,
with its own cost remembered
forever.

Now you sell 50 pieces

40 from older stock
 $40 \times 20 = 800$

+

10 from newer stock
 $10 \times 30 = 300$

=

True cost of those 50
1,100 ETB

Money in (50×60 , before VAT)
Less true cost

3,000 ETB
– **1,100 ETB**

Your profit
1,900 ETB

Older stock is counted at the older cost — exactly as it should be

The three things worth knowing

- **Oldest-expiry stock sells first.** The system always takes from whatever expires soonest, so nothing sits and goes out of date.
- **Old stock keeps its old cost.** Buying more at a higher price never changes the profit on sales you already made.
- **VAT is not profit.** VAT is collected for the tax office, so it is left out of the profit figure.

Want to see the batches? Menu → **Inventory** → **Batches**. You will see each delivery, its cost, and how many are left. (Cost figures are visible to Administrators and Store Managers only.)

7. Checking stock and expiry

Menu → **Inventory**. The four coloured boxes at the top are buttons — press one to see that list.

TOTAL STOCK UNITS

1,284

LOW STOCK

3

OUT OF STOCK

1

EXPIRED

2

[click me →](#)

Current stock

PRODUCT	TYPE	QTY	EXPIRY	STATUS
Paracetamol 500mg	Medicine	492	2028-02-04	OK
Amoxicillin 250mg	Medicine	8	2026-09-02	LOW
Knee Support Brace	Medical Device	10	—	OK

The device has a dash for expiry — it does not expire, and that is fine

If something has expired

1

Take it off the shelf

Right away. Do not dispense it.

2

Tell the Store Manager

They record a

Stock Out

with the reason "expired write-off", so the count matches the shelf.

3

Check what else is close

Inventory → Expired → the

Within 30 days

tab.

8. Who can do what

You only see the pages your job needs. If a page refuses you, that is normal — not a fault.

TASK	CASHIER	PHARMACIST	STORE MANAGER	ADMIN
Use the till	Yes	Yes	No	Yes
Reprint a receipt	Yes	Yes	Yes	Yes
Add / register a customer	Yes	Yes	Yes	Yes
See what's in stock	No	Yes	Yes	Yes
Add or edit products & prices	No	No	Yes	Yes
See cost prices & profit	No	No	Yes	Yes
Record a delivery	No	No	Yes	Yes
Fix stock counts	No	No	Yes	Yes
Cancel (void) a sale	No	No	No	Yes
Save reports as PDF / Excel	No	No	Yes	Yes
Settings, staff, audit log	No	No	No	Yes

Why can't a Cashier see cost prices? What the pharmacy pays suppliers is confidential business information. You see the selling price everywhere you need it.

9. When something goes wrong

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
"You do not have permission"	Your job does not include that page	Normal. Ask someone with the right role
Locked out after wrong passwords	Safety lock, 30 minutes	Wait, or ask your Administrator
Asked to change password at sign-in	New or reset account	Create your own password — you cannot skip it
"Not enough stock"	The shelf has more than the system thinks	Ask a Store Manager to correct the count
Item missing from the till search	It is out of stock, or switched off	Ask a Pharmacist or Store Manager to check
Phone number rejected for a new customer	That customer already exists	Open the customer named in the message
A red Rx tag on an item	Prescription required	See a valid prescription before dispensing
Customer wants to return something	There is no return button, by design	Ask an Administrator to void the sale, then ring it up correctly

If a patient may have been harmed — wrong item dispensed, expired stock sold — follow the pharmacy's incident procedure *first*. The computer record can be fixed afterwards; patient safety cannot wait.

Need more detail?

This is the picture guide. The written guide ([docs/USER_GUIDE.md](#)) covers every screen and every role step by step.

Reports, invoices and exports produced by PharmaCare are drafts for human review. Anything going to customers, regulators or the Board needs sign-off per Bank policy.
