

Cashier

Everything you need at the till: selling, receipts, customers and what to do when something looks wrong.

Written for

Cashiers

Covers

Every task in your role

Languages

English / አማርኛ

What's in this guide

1. Signing in and finding your way
2. Working across branches
3. Selling something — the till, step by step
4. What you sell — more than medicines
5. Prescription items
6. Receipts, reprints and corrections
7. Looking up a medicine's identity
8. Customers
9. Your alerts
10. Working in Amharic
11. What your role cannot do
12. When something goes wrong

Signing in and finding your way

The same three steps every shift.

1 Open <https://pharmacare-five-ebon.vercel.app/>

Bookmark it, or add it to your phone's home screen.

2 Type your username and password

Your username is personal — never share it or sign in as someone else. Everything you do is recorded against your name.

**3 You land on the
Point of Sale
screen — your till**

The system sends each role to the page they use most.

First sign-in, or after a password reset. You are asked to create your own password before you can do anything else. This is deliberate — it means nobody else knows it, including your manager. You need at least **10 characters** with a capital letter, a small letter, a number and a symbol. Example of the right shape (do not use this one): `Bole#Pharm24`

Five wrong passwords locks you out for 30 minutes. This is a safety measure against someone guessing their way in. Wait it out, or ask an Administrator to clear it. Use **Forgot your password?** on the sign-in page if you truly cannot remember it.

1 Menu (only your pages) · 2 Language, alerts, sign out · 3 Main work area

The top bar, button by button

BUTTON	WHAT IT DOES
	On a phone or tablet, opens the menu. Tap outside it to close.
 Globe	Switches the whole system between English and አማርኛ — including printed receipts. Your choice is remembered.
 Moon	Dark mode, easier on the eyes in a dim dispensary.
 Bell	Your alerts. A red number means unread. Click one to jump to what it is about.
Your name	My Profile (change your details or language) and Logout . Always log out on a shared computer.

Working on a phone? Everything works on a small screen. The menu hides behind ☰ and tables scroll sideways.

Working across branches

Each branch keeps its own stock. The product list, customers and suppliers are shared.

What is shared, and what each branch keeps to itself

SHARED across every branch

Product catalogue & prices · Customers & loyalty points · Suppliers · Staff accounts · Settings
One paracetamol record, one customer record — wherever they shop.

Main Branch

MAIN

Its own stock quantities
Its own batches & costs
Its own sales & purchases
Its own reorder levels
Invoices: INV-000001

Bole Branch

Its own stock quantities
Its own batches & costs
Its own sales & purchases
Its own reorder levels
Invoices: BOL-000001

Gondar Branch

Its own stock quantities
Its own batches & costs
Its own sales & purchases
Its own reorder levels
Invoices: GON-000001

You can only sell stock your own branch holds — the till will not offer another branch's shelves

Your branch is shown in the top bar next to a shop icon. You cannot change it, and that is deliberate — your account is tied to where you work.

What this means day to day: the till only offers stock your branch actually holds, and the sales you see are your branch's. If a product is missing from the till search, your branch may have none even though another branch does — ask a Store Manager about a transfer.

Selling something — the till, step by step

Menu → **Point of Sale**. Left side finds the item, right side takes the money.

Scan barcode or type a name / code

COMPLETE SALE

1 Scan or search · 2 Check type, stock, Rx tag · 3 Adjust qty / discount · 4 Customer, payment, cash taken

1 Put the cursor in the search box

It is already there when the page opens. If you clicked elsewhere, click the box again.

2 Add the item — two ways

Scanner:

point and shoot. The scanner types the barcode and presses Enter for you, and the item drops straight into the basket.

By hand:

type part of the name, the code, or the generic name. Results appear as you type — click the row or its **Add** button.

3 Check what you added

Under each name you see the

type

(Medicine, Cosmetic, Medical Device...) and how many are

available

. A red

Rx

tag means a prescription is required — see the next section.

4 Set the quantity

Type over the **qty** box. If you try to go above what is in stock, the system tells you the real number and holds you there.

5 Add a discount if you were told to

The **disc %** box is per item, not for the whole basket. Leave it at 0 unless a manager has authorised a discount.

6 Remove a mistake

Press the **×** on that line, or

Clear

to empty the whole basket and start again.

7 Pick the customer

Leave it on **Walk-in customer** for someone not registered. Choosing a named customer earns them loyalty points automatically.

8 Choose how they are paying

Cash, Card, or Mobile Money.

9

Type what they handed you

Put the amount in **Paid**. The

change due

figure appears instantly — read it from the screen rather than doing the sum in your head.

10

Press Complete Sale

You get the invoice number and the change. Then choose

View / Print Invoice

to print the receipt, or

New Sale

to move to the next customer.

You cannot accidentally oversell. The system checks the real stock at the moment you press Complete Sale — even if a colleague sold the last packet a second earlier on another till. If there is not enough, nothing is recorded and you are told how many are actually left.

You cannot accidentally sell expired stock either. If every pack of a product has passed its expiry date, Complete Sale is refused with a clear message — it is not a warning you can click past. If you see this, remove the product from the shelf and tell a Store Manager so it can be written off.

Reading the totals. *Subtotal* is the plain price × quantity. *Discount* comes off next. *VAT* is added after the discount. The big **Total** is what the customer pays.

What you sell — more than medicines

The counter sells tablets, but also creams, dressings and equipment. They are all in the same list and behave the same way.

Some things have no expiry date — a knee support or a blood-pressure monitor, for example. You will see a dash where the date would be. That is normal and not a fault.

Prescription items

Some products carry a red **Rx** tag. When you add one to the basket a message appears asking you to confirm you have seen a valid prescription.

- 1 Read the message and stop**
Do not click it away by reflex.
- 2 Check the prescription in your hand**
Right patient, in date, signed.
- 3 If anything is unclear, call the Pharmacist**
Do not guess. This is exactly the moment to ask.

The on-screen message is a reminder, not a legal check. The pharmacist is responsible for the decision to dispense.

Receipts, reprints and corrections

Reprinting a receipt

- 1 Menu → Sales**
Every sale, newest first.
- 2 Find it**
Search by invoice number (for example `INV-000042`) or by customer name.
- 3 Press the receipt icon, then Print**
Prints the same document as the original.

You cannot cancel or change a completed sale. This is deliberate — a sale is a money record. If something is wrong:

- **Whole sale wrong** → ask an Administrator to *void* it. Stock goes back automatically. Then ring the correct sale.
- **One item wrong** → ring up the correct items, and tell a Store Manager which items came back so they can put them into stock.

Looking up a medicine's identity

You don't browse a separate catalogue — use the same search box you already use at the till, or **Medicines** in the sidebar.

What you can use it for. Checking whether a product exists and what it actually is — its full name, strength, form, and whether it needs a prescription. Useful when a customer asks for something by a brand name you do not recognise: search the brand and the generic name behind it is shown alongside it.

What you cannot do. Registering a new product into stock is a Store Manager job — and the shared standard catalogue behind it (ATC codes, legal classes) is managed at the platform level, not by any one pharmacy.

Customers

Menu → **Customers**. Registering someone lets them earn loyalty points and gives you their purchase history.

Registering a new customer

1 Customers → Add Customer

Name and phone number are required; email and address are optional.

2 Save Customer

They are immediately selectable at the till.

One phone number, one customer. If the number is already registered, the system refuses and *tells you which customer has it* — open that record instead of creating a second one. Two records for the same person split their history and loyalty points, which is painful to unpick later.

Spacing does not matter: 0911 22 33 44 and 0911223344 are treated as the same number.

1 Loyalty points

The field is not shown to your role. Points are added automatically when a named customer buys something.

2 You cannot delete customers

Ask a Store Manager or Administrator if a record genuinely must go.

Your alerts

The  bell shows messages meant for your role. Click one to jump straight to what it refers to, or open **Notifications** for the full list.

Alerts about stock levels and expiry are aimed at the Pharmacist and Store Manager, so you will see fewer than they do. That is normal.

Working in Amharic

Press the  globe in the top bar and choose አማርኛ.

Switching changes everything: menus, buttons, warning messages, printed receipts and exported reports. Product names stay exactly as they were typed in, because those are your own data, not part of the system's wording.

Your choice sticks to your account, so a colleague on the same computer can work in English while you work in Amharic.

What your role cannot do — and who to ask

Who can do what

Permissions follow the job, not seniority — the Store Manager has no till, the Cashier has no stock screens

	Cashier	Pharmacist	Store Mgr	Admin
Use the till	✓	✓	✗	✓
See stock & expiry	✗	✓	✓	✓
Edit products & prices	✗	✗	✓	✓
See cost & profit	✗	✗	✓	✓
Record purchases	✗	✗	✓	✓
Void a sale	✗	✗	✗	✓
Settings & audit log	✗	✗	✗	✓

YOU NEED TO...

ASK A...

Cancel or correct a completed sale	Administrator (only they can void)
Change a price, or add a new product	Store Manager or Administrator
Check stock levels or expiry lists	Pharmacist, Store Manager or Administrator
Delete a customer	Store Manager or Administrator
See cost prices or profit	Not available to your role — this is business-confidential
Save a report as PDF or Excel	Store Manager or Administrator

Being refused a page is not an error or a sign of distrust — the system simply shows each role what their job needs.

When something goes wrong

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
"You do not have permission"	That page is not part of your role	Normal. See the table above for who to ask
Locked out after wrong passwords	Safety lock for 30 minutes	Wait, or ask an Administrator to clear it
Asked to change password when signing in	New account, or an Administrator reset it	Create your own password — you cannot skip this
"Not enough stock"	The shelf has more than the system thinks	Sell what the system allows, then ask a Store Manager to correct the count
An item does not appear when searching	It is out of stock, or switched off in the catalogue	Ask a Pharmacist or Store Manager to check it
Phone number rejected for a new customer	That customer already exists	Open the customer named in the message
Red Rx tag on an item	Prescription required	Check the prescription; call the Pharmacist if unsure
Barcode scanner does nothing	The cursor is not in the search box	Click the search box, then scan again
Screen looks wrong or frozen	Page needs reloading	Press F5 . Nothing in a saved sale is lost

If a patient may have been harmed — the wrong item dispensed, expired stock sold, a dosage mix-up — follow the pharmacy's clinical incident procedure **first**. The computer record can be corrected afterwards; patient safety cannot wait for paperwork.

Reporting a problem usefully

Tell your Administrator four things: **1)** what you were doing, **2)** what you expected, **3)** what actually happened (the exact wording of any message), **4)** your role and username. That is usually enough to fix it without a back-and-forth.

PharmaCare Management System · internal use only. Reports, invoices and exports are drafts for human review — check them before anything goes to a customer, supplier or regulator.
