

Pharmacist

Dispensing, prescription checks, stock and expiry — plus the reports and batch information you need on shift.

Written for

Pharmacists

Covers

Every task in your role

Languages

English / አማርኛ

What's in this guide

1. Signing in and finding your way
2. Working across branches
3. Dispensing at the till
4. Prescription-only items
5. What you sell — more than medicines
6. Where a medicine's details come from
7. Checking stock before you dispense
8. Expiry checks and what to do
9. Understanding batches
10. Tracing stock movements
11. Stock aging and value at risk
12. Suppliers
13. Reports you can use
14. Customers
15. Working in Amharic
16. What your role cannot do
17. When something goes wrong

Signing in and finding your way

The same three steps every shift.

1

Open <https://pharmacare-five-ebon.vercel.app/>

Bookmark it, or add it to your phone's home screen.

2

Type your username and password

Your username is personal — never share it or sign in as someone else. Everything you do is recorded against your name.

3

**You land on the
Point of Sale
screen**

The system sends each role to the page they use most.

First sign-in, or after a password reset. You are asked to create your own password before you can do anything else. This is deliberate — it means nobody else knows it, including your manager. You need at least **10 characters** with a capital letter, a small letter, a number and a symbol. Example of the right shape (do not use this one): `Bo1e#Pharm24`

Five wrong passwords locks you out for 30 minutes. This is a safety measure against someone guessing their way in. Wait it out, or ask an Administrator to clear it. Use **Forgot your password?** on the sign-in page if you truly cannot remember it.

The top bar, button by button

BUTTON	WHAT IT DOES
	On a phone or tablet, opens the menu. Tap outside it to close.
 Globe	Switches the whole system between English and አማርኛ — including printed receipts. Your choice is remembered.
 Moon	Dark mode, easier on the eyes in a dim dispensary.
 Bell	Your alerts. A red number means unread. Click one to jump to what it is about.
Your name	My Profile (change your details or language) and Logout . Always log out on a shared computer.

Working on a phone? Everything works on a small screen. The menu hides behind ☰ and tables scroll sideways.

Working across branches

Each branch keeps its own stock. The product list, customers and suppliers are shared.

What is shared, and what each branch keeps to itself

SHARED across every branch

Product catalogue & prices · Customers & loyalty points · Suppliers · Staff accounts · Settings
One paracetamol record, one customer record — wherever they shop.

Main Branch

MAIN

Its own stock quantities
Its own batches & costs
Its own sales & purchases
Its own reorder levels
Invoices: INV-000001

Bole Branch

Its own stock quantities
Its own batches & costs
Its own sales & purchases
Its own reorder levels
Invoices: BOL-000001

Gondar Branch

Its own stock quantities
Its own batches & costs
Its own sales & purchases
Its own reorder levels
Invoices: GON-000001

You can only sell stock your own branch holds — the till will not offer another branch's shelves

Your branch is shown in the top bar next to a shop icon. You cannot change it, and that is deliberate — your account is tied to where you work.

What this means day to day: the till only offers stock your branch actually holds, and the sales you see are your branch's. If a product is missing from the till search, your branch may have none even though another branch does — ask a Store Manager about a transfer.

Dispensing at the till

You have the same till as the Cashier. Menu → **Point of Sale**.

COMPLETE SALE

1 Scan or search · 2 Check type, stock, Rx tag · 3 Adjust qty / discount · 4 Customer, payment, cash taken

1**Scan or search**

Barcode, name, code, or generic name.

2**Check type, stock and any Rx tag**

Shown under each product name.

3**Set quantity and any authorised discount**

Stock is enforced — you cannot exceed it.

4**Choose customer and payment, enter cash taken**

Change due appears automatically.

5**Complete Sale, then print if needed**

Stock drops immediately.

Oldest-expiry stock is dispensed first, automatically. You do not have to pick batches by hand — selling normally always draws down the packs that expire soonest. If every pack of a product has already expired, the sale is refused outright rather than let through with a warning — remove it from the shelf and have a Store Manager write it off.

Prescription-only items

Products marked **Rx** trigger a confirmation before they enter the basket. As the Pharmacist, this is your professional check, not a formality.

1 Verify the prescription

Correct patient, in date, prescriber identifiable, dose and quantity legible.

2 Check the product against it

Right medicine, right strength, right form.

3 Check the stock itself

Intact packaging, and in date — see the expiry section below.

4 Counsel the patient

Dose, timing, food, common side effects, what to do if a dose is missed.

5 Then confirm on screen

The system flags Rx items as a discipline aid. It cannot judge clinical appropriateness, interactions or dose. That judgement stays with you.

What you sell — more than medicines

Durable items have no expiry date (a brace, a monitor) and show a dash instead. They are correctly excluded from expiry warnings. Anything swallowed or applied to skin always carries an expiry date.

Where a medicine's details come from

You don't browse a separate catalogue — the standard reference identity (generic name, strength, form, legal class) is already copied onto each medicine's own detail page, because it was locked in when a Store Manager or platform staff registered that stock.

On a medicine's detail page

- **Identifying a brand.** The generic (INN) name is shown alongside the brand — the same identity everywhere it's sold, not this pharmacy's own wording.
- **Checking the legal class.** Over the counter, prescription only, or controlled — and that classification, not anyone's opinion, is what sets the till warning.
- **Strength and form.** Shown exactly as registered, so there's no ambiguity between, say, two different strengths of the same tablet.

The full standard catalogue itself (ATC codes, cold-chain flags, data source) is a platform-level reference list, not something any one pharmacy's staff browse directly — if something about a medicine's identity looks wrong, flag it to your Store Manager or Administrator.

Checking stock before you dispense

Menu → **Inventory**. This is your stock picture for the whole shop.

TOTAL STOCK UNITS

1,284

LOW STOCK

3

OUT OF STOCK

1

EXPIRED

2

← all clickable

Current stock

PRODUCT	TYPE	QTY	EXPIRY	STATUS
Paracetamol 500mg	Medicine	492	2028-02-04	OK
Amoxicillin 250mg	Medicine	8	2026-09-02	LOW
Knee Support Brace	Medical Device	10	— none	OK
Nivea Cream 200ml	Cosmetic	27	2028-08-12	OK

The device shows “— none” for expiry. That is correct: it does not expire.

1 Search by name or code

Fastest way to answer “do we have any?”

2 Filter by status

Low stock , Out of stock or Expired .

3 Use the four cards at the top as shortcuts

Each one opens the matching list. They are buttons, not just numbers.

4 Read the status column

OK,
LOW

(at or below reorder level) or

OUT

. An expiry warning appears alongside.

You can see quantities, reorder levels and expiry dates, but not cost prices — those are restricted to Administrators and Store Managers.

Expiry checks and what to do

Menu → **Inventory** → the **Expired** card, or Inventory → Expired.

TAB	MEANING	ACTION
Expired	Already past its date	Do not dispense. Remove from the shelf now and quarantine it
Within 30 days	Expiring very soon	Dispense these first; consider a supplier return
Within 60 days	On the horizon	Watch it; avoid reordering more until it moves

If you find expired stock on the shelf

1 Remove it immediately

Before anything else. Put it in the quarantine area, not back on the shelf.

2 Tell the Store Manager

They record a **Stock Out** with the reason “expired write-off” so the system count matches the shelf.

3 Check the rest of that product

Other packs may be from the same batch — use Inventory → Batches.

4 If any may have reached a patient

Follow the clinical incident procedure straight away.

Understanding batches

Menu → Inventory → Batches.

Same product bought twice at different prices

Older batch

40 pieces
cost 20 ETB each
was sold at 50 ETB

Newer batch

100 pieces
cost 30 ETB each
now sold at 60 ETB

Kept separate, forever

Each delivery keeps its own cost.
Nothing overwrites anything.
Soonest expiry is sold first.

You sell 50 pieces

40 from older batch

$40 \times 20 = 800$

+

10 from newer batch

$10 \times 30 = 300$

=

True cost of those 50

1,100 ETB

Money in (50×60 , VAT excluded)

3,000 ETB

Gross profit

Less true cost of goods

- 1,100 ETB

1,900 ETB

Buying more later at 45 ETB does not change this figure.

Older units are costed at the older price — which is why profit stays correct

You will not see the cost columns shown above — those are restricted — but the batch list and the soonest-expiry-first order are visible to you, which is what matters clinically.

Each delivery of a product is stored separately, with its own expiry date and its own remaining quantity. This is why the system can dispense soonest-expiry first, and why you can trace which delivery a pack came from.

Useful for: a recall (which batch, how many left, where it came from), an expiry sweep, or checking whether a product has newer stock behind the older packs.

Cost columns are not shown to your role.

Tracing stock movements

Menu → **Inventory** → **Manage** → **Stock Ledger**.

Where did those packs go? The ledger answers it

DATE	CAUSE	CHANGE	BALANCE	REFERENCE
10 Sep 09:14	Purchase received	+100	500 → 600	PUR-000001
10 Sep 10:02	Sale	-30	600 → 570	INV-000001
10 Sep 11:30	Stock out (breakage)	-5	570 → 565	
10 Sep 14:05	Transfer out → Bole	-40	565 → 525	→ BR-002
10 Sep 16:20	Sale voided	+30	525 → 555	INV-000001

Nothing can change stock without appearing here. Entries are never edited or deleted.

Every change to stock appears here with a running balance — purchases, sales, voids, transfers, corrections and stocktakes. It is append-only: entries are never edited or deleted.

When you will reach for it: a count looks wrong and you need to know what happened; a recall means tracing where a batch went; or a colleague asks why stock dropped overnight. Filter by product name or by a reference such as an invoice number.

Stock aging and value at risk

Menu → **Inventory** → **Manage** → **Stock Aging**.

Groups everything on hand by how long it has left: expired, 0–30 days, 31–90, 91–180, over 180, and items with no expiry at all.

Use the 0–30 day bucket as your weekly action list: those are the packs to dispense first and to flag to the Store Manager for a possible supplier return. Value figures are hidden from your role; the counts are not.

Suppliers

Menu → **Suppliers**. You can **view** supplier records — contact person, phone, email, and how many products they supply — which is what you need to chase a delivery or ask about a shortage. Adding and editing suppliers is a Store Manager task.

Reports you can use

Menu → **Reports**. You will see seven; the two financial ones are not available to your role.

REPORT	WHAT YOU WOULD USE IT FOR
Sales	Every sale in a date range — checking what went out on a given day
Sales Summary	Daily / weekly / monthly / yearly totals
Inventory	Full stock position, printable for a shelf check
Low Stock	What needs reordering — hand this to the Store Manager
Expired & Expiring	Your expiry sweep list, with 30- and 60-day horizons
Supplier	Who supplies what
Customer	Purchase history and loyalty points

1 Pick the report, then set the dates

Most default to the current month.

2 Press Apply

Totals appear in the yellow boxes above the table.

3 Press Print for a paper copy

Saving as PDF or Excel is limited to Store Managers and Administrators — ask if you need a file to send.

Customers

Menu → **Customers**. Registering someone lets them earn loyalty points and gives you their purchase history.

Registering a new customer

1 Customers → Add Customer

Name and phone number are required; email and address are optional.

2 Save Customer

They are immediately selectable at the till.

One phone number, one customer. If the number is already registered, the system refuses and *tells you which customer has it* — open that record instead of creating a second one. Two records for the same person split their history and loyalty points, which is painful to unpick later.

Spacing does not matter: 0911 22 33 44 and 0911223344 are treated as the same number.

1

Loyalty points

The field is not shown to your role. Points are added automatically when a named customer buys something.

2

You cannot delete customers

Ask a Store Manager or Administrator if a record genuinely must go.

Working in Amharic

Press the  globe in the top bar and choose አማርኛ.

Switching changes everything: menus, buttons, warning messages, printed receipts and exported reports. Product names stay exactly as they were typed in, because those are your own data, not part of the system's wording.

Your choice sticks to your account, so a colleague on the same computer can work in English while you work in Amharic.

What your role cannot do

TASK	WHO DOES IT
Add or edit a product, price or category	Store Manager / Administrator
Record a delivery (purchase)	Store Manager / Administrator
Correct a stock count / write off expired stock	Store Manager / Administrator
See cost prices, purchase records or profit	Store Manager / Administrator
Void a sale	Administrator only
Export reports to PDF / Excel	Store Manager / Administrator

When something goes wrong

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
"You do not have permission"	That page belongs to another role	Normal. See the table above
"Not enough stock" when you can see the packs	System count is behind the shelf	Ask a Store Manager for a Stock Adjustment; do not force the sale
An expired item won't go through at the till	Correct behaviour — every pack of it has expired	Remove it from the shelf; ask a Store Manager to write it off. It cannot be sold, not even by mistake
A device shows no expiry date	It does not expire	Correct behaviour — nothing to do
Locked out after wrong passwords	Safety lock, 30 minutes	Wait, or ask an Administrator
No Export buttons on a report	Exporting is restricted	Ask a Store Manager or Administrator
Cost columns missing	Your role is not cleared for cost data	Expected. Ask a Store Manager if you need a figure
Phone number rejected for a new customer	That customer already exists	Open the record named in the message

If a patient may have been harmed — the wrong item dispensed, expired stock sold, a dosage mix-up — follow the pharmacy's clinical incident procedure **first**. The computer record can be corrected afterwards; patient safety cannot wait for paperwork.

Reporting a problem usefully

Tell your Administrator four things: **1)** what you were doing, **2)** what you expected, **3)** what actually happened (the exact wording of any message), **4)** your role and username. That is usually enough to fix it without a back-and-forth.

PharmaCare Management System · internal use only. Reports, invoices and exports are drafts for human review — check them before anything goes to a customer, supplier or regulator.
